

SAUMYA JAIN

Lead Frontend Engineer · Angular & React Specialist · AWS Certified

NJ, USA · (973)281-2451 · saumyajn1994@gmail.com · [LinkedIn](#) · [Portfolio](#)

Frontend engineer with 6+ years cutting load times, eliminating defects, and scaling Angular/Node.js systems to enterprise level. Built the Angular component libraries that power PNC Bank's web platform. Not just shipping features setting the standard other teams build against.

TECHNICAL SKILLS

Frontend: Angular (v2–v20), React.js, Next.js, TypeScript, JavaScript (ES6+), Tailwind CSS, MUI, Redux, Storybook, Micro-frontends, Webpack, HTML, SCSS

Backend: Node.js, Express.js, Java, Spring Boot, RESTful APIs, Microservices, PostgreSQL, MongoDB

Cloud & DevOps: AWS Certified Developer (Associate), Docker, Kubernetes, OpenShift, Jenkins, CI/CD, DynamoDB, S3

Testing & Tools: Jest, Karma, Jasmine, Selenium, Git, SonarQube, JIRA, Agile/Scrum

PROFESSIONAL EXPERIENCE

Lead Software Engineer – Front End | Virtusa Corporation (Client: PNC Bank)

Nov 2020 - Present

- Architected 5+ Angular schematic libraries now used as the foundational UI framework across all of PNC Bank's web applications, directly cutting boilerplate setup time for distributed teams by standardizing component APIs and enforcing consistent patterns bank-wide.
- Reduced production defect rate by 30% by designing and owning enterprise CI/CD pipelines in Jenkins and Docker with integrated Jest and Karma test suites, turning an inconsistent release process into a predictable, auditable workflow.
- Improved API response performance by 20% by engineering SSR workflows with Next.js and Typescript, eliminating client-side render blocking on high-traffic, user facing pages.
- Raised team code quality scores by 25% (measures via SonarQube + Git metrics) by implementing Git flow standards and leading hands-on code review sessions with junior engineers, resulting in faster PR cycles and fewer critical regressions.
- Delivered a 90% resolution rate on business-critical product features by acting as the primary technical liaison between engineering and product owners, translating ambiguous requirements into actionable technical specs.
- Accelerated developer onboarding by authoring internal documentation that reduced time-to-first contribution for new team members across distributed squads.

Full Stack Developer | Mind Strength Inc

May 2017 - Feb 2018

- Cut average page load time by 25% through RESTful API optimization and client-side data caching strategies, directly improving user retention metrics.
- Eliminated a category of late-stage bugs by establishing automated regression coverage with Jasmine and Selenium, catching defects before they reached QA.
- Accelerated feature delivery by introducing modular npm-based architecture across the Node.js/Angular stack, reducing average time to integrate new capabilities

PROJECTS

Turing Shell Protocol (Angular, Node.js & Python): Built a real-time 'Human or Bot' evaluation platform using Angular 20 Signals for reactive UI state and a Python microservice for NLP pattern processing. Architected for <100ms interaction latency. Published technical writeup on [Medium](#).

Arcade Stack – Real-Time Gaming Architecture (React): Engineered a modular browser gaming platform with sub-frame-latency game state management via custom React hooks and aggressive code-splitting — achieving smooth performance across complex, concurrent game states.

Pages of Flavor – Enterprise CMS & Auth Platform (Full Stack): Delivered a dual-database CMS with real-time content publishing, Firebase-backed RBAC authentication, and animated navigation. Architected to support concurrent read/write across PostgreSQL and MongoDB without data consistency issues.

EDUCATION

Master of Science, Computer Science | New Jersey Institute of Technology (NJIT)

Bachelor of Technology, Computer Science | Mody University, Rajasthan, India

CERTIFICATIONS

AWS Certified Developer – Associate (DVA-C02) | Issued: Sept 2024
